

TB

No symptoms, no chance of TB?

THINK AGAIN!

Did you know that Tuberculosis (TB) can be inactive in your body for a long time? This is called latent TB.

It is very common and has NO symptoms. It can become active TB at any time – this can kill if untreated - and be passed on to your friends and family!

You are at more risk of latent TB if you are aged 16 to 35 and have arrived in the UK in the last 5 years from a country with high rate of TB.

If this is you:

- ✓ You can be tested for latent TB quickly and easily with a blood test
- ✓ Treatment and testing are FREE regardless of immigration status
- ✓ You can also check for Hepatitis at the same time

**To make an appointment for
your free test by contacting the
TB Service on 024 7696 1351**

The testing service is for people who have lived in or spent >3 months in a country with a high rate of TB in the last 5 years. This includes many countries in Africa and Asia.
